

CONNECTING TO WIFI IN DORM

Username: Full Email Address

Password: Email Password

In the dorm this semester, you may notice two different SSID's being broadcast for NEMCC-Secure. One is NEMCC-Secure-5G and the other NEMCC-Secure-2.4G. If your device is capable of connecting to the 5 GHz band, you should always connect to it. If your device is not capable of connecting to the 5 GHz band you will not see it and will need to connect to the 2.4 GHz band. All game stations and smart TV's will still need to connect to the guest network and be registered to work. For instructions on registering the device, go to www.nemcc.edu and click on Help Desk under Quick Links. Then click on Knowledge Base and choose How do I connect my Apple TV or Game Console to the WIFI network?
